

PageCenterX

Manage Your Business-Critical Content

Any Document, Anytime, Anywhere

From financial statements to customer orders to HR reports, documents drive your most important business processes. While some are printed or emailed, many more documents are stored in electronic form for legal, cost-containment, or compliance reasons.

PageCenterX[®] content management software from Levi, Ray & Shoup, Inc. (LRS) gives you immediate browser-based access to your most important documents, whether they originated on legacy mainframe and distributed platforms or physical or virtual desktops.

Organizations need a way to access any document — instantly — from any desktop or mobile device in the company. The PageCenterX solution provides a scalable single point of control for managing content storage and access throughout the document lifecycle.

Unlock the Value of Documents

PageCenterX software from LRS goes beyond simple document archiving. This scalable solution:

- Saves money and improves employee productivity by providing instant document access and hardcopy reduction
- Connects document workflows with critical business processes, letting users easily import hard-copy documents for online access, “subscribe” to recurring document types, and receive email report notifications
- Leverages existing infrastructure investments through integration with popular business applications, office productivity suites, and network security solutions
- Provides seamless integration with print management & auditing packages for complete control over your document environment

AT A GLANCE

PageCenterX

PageCenterX software establishes a single secure facility to store, locate, and view application output and other content quickly using a standard web browser with full auditing capabilities.

The solution helps users obtain maximum value from information through automated indexing, encryption and advanced search features.

Built-in integration with the Microsoft Office productivity suite enables users to seamlessly access and store documents in the PageCenterX archive without switching applications.

Real Customers. Real Metrics.

- A global vehicle company reduced their print volumes by over 2 million pages.
- A large electronics retailer saved over \$350,000 per year by adopting a view-not-print strategy using PageCenterX.
- A European manufacturer decreased the time to retrieve invoice data from 16 hours per week to just seconds.
- Employees at an international metals processor lowered their paper usage by 90% after installing PageCenterX software.

PageCenterX Software in Your Environment

Documents play a critical role in nearly every business transaction. But few workers actively manage their reports and other business correspondence. PageCenterX software lets you spend more of your time using data and less time looking for it.

The intuitive PageCenterX interface provides web-based facilities to access, search, and annotate any document regardless of format. Single sign-on integration with Active Directory lets users access the system without forcing them to remember yet another password.

For users on the go, the PageCenterX mobile interface offers a simple yet powerful way to access documents wherever they are needed. Authorized users can also share documents electronically by sending a link or an attachment to an email recipient.

Workers in healthcare, manufacturing, and other industries often rely on an integrated application environment for the majority of their work tasks. PageCenterX software provides a documented interface for seamless connectivity to packaged software or custom-developed applications.

Built-in integration with the Microsoft Office productivity suite lets users open documents from or import documents to PageCenterX storage. All without leaving the Excel spreadsheet, MS-Word document, or other Microsoft application.

Result? End users get the benefits of robust content management without having to learn a new software package.

Page Center X: Features & Benefits

FEATURES	BENEFITS
Electronic document storage & distribution	Saves money by reducing the need for hardcopy distribution and print-related infrastructure
Light footprint, web-based architecture	Provides easy access for office-based and mobile users; no client software to install
Integration with Microsoft Office suite	Enables end users to save files to and retrieve from PageCenterX storage without leaving Word, Excel, etc.
Extensive audit facilities and access records	Aids in e-discovery and compliance efforts
Integration with document imaging devices	Saves time by archiving documents directly from device ("Scan2PCX" (e.g., HP MFPs, Kofax capture solutions, etc.)
Streamlined interface for mobile devices	Enhances usability for mobile workers on the go
Support for multiple document formats and computing platforms	Protects your investment in existing hardware, software, and document data streams

LRS Implementation Services **Archive Conversion Services**

The best technology in the world won't save you money if it's not implemented correctly. That's why LRS offers a full range of services to help customers evaluate their document delivery needs, develop appropriate output strategies, and execute them on time and on budget.

LRS document experts can help your implementation team:

- Migrate one or more legacy archives to a unified content management system with an intuitive browser-based interface
- Implement a Cloud-based document strategy to minimize your on-site hardware and software requirements
- Identify ways to reduce cost and/or improve document security through the use of data stream conversions, watermarks, electronic document overlays, encryption, and more
- Develop a comprehensive document strategy encompassing printer and driver management, document storage/access, tracking/auditing, document security/encryption, etc.

For the enterprise with one or more existing archives, change can be as intimidating as it is challenging. Let LRS do the heavy lifting. LRS consultants have a set of conversion utilities designed to safely migrate data to PageCenterX format — and the skills to make them work for you.

Following a structured conversion methodology, LRS consultants use these utilities to convert business data and associated metadata. Working with client stakeholders, LRS tailors conversion tools to the specific customer environment and then provides these tools to the customer to migrate their data into the LRS solution.

Staff and Administrator Training

To get the most value from your software investment, your users and administrators need to learn the full capabilities of the PageCenterX software. LRS can provide administrator and end-user instruction in either "train-the-trainer" or direct training format, depending on your needs.

PageCenterX Application Programming Interface (API)

PageCenterX software can seamlessly integrate with line-of-business applications and corporate portals via APIs. LRS publishes and supplies API methods to help organizations leverage the advanced document search, storage, compression/encryption and other PageCenterX capabilities from within their existing systems. This lets end users quickly and securely access critical information without having to learn another application.

LRS Enterprise Output Server Solutions

PageCenterX software is a powerful tool for storing, managing, and accessing documents in electronic form. It is also an integral part of the LRS® Enterprise Output Server; a robust, scalable platform that helps organizations:

- Reduce spending on paper, toner, and other consumables
- Consolidate or eliminate printers, print servers, and other costly print infrastructure components
- Enhance user and IT staff productivity by eliminating the burden of print management

A recent analyst study concluded that the LRS customers reported a five-year ROI of 492% and a payback period of 10 months.

For nearly four decades, LRS has maintained a singular focus on providing the world's most reliable and feature-rich enterprise output management solutions. LRS software is running on six continents in more than 5,000 locations, helping customers from nearly every industry sector save money through improved output management.
